
Adaptive Artificial Intelligence (AAI) as Your Thinking Partner

Workshop proposed under the Leadership of Planning and Development & PITB

Prof. Dr. Zahid Asghar

Planning Monitoring Data and Analytics Section – UNICEF

Background

Artificial Intelligence (AI) is no longer a futuristic concept – it is a present-day driver of transformation across governance, development planning, and public service delivery. For the Government of Punjab, AI holds particular promise in addressing complex policy challenges, streamlining workflows, and improving the quality and speed of decision-making. From analyzing lengthy policy documents to interpreting large datasets and generating actionable insights, AI can act as a strategic partner to human expertise—amplifying the province’s capacity to design, implement, and monitor impactful policies.

However, effective AI integration requires more than just awareness of tools. It demands an understanding of AI’s capabilities and limitations, ethical use principles, and the skills to embed AI into day-to-day operations. This workshop responds to that need by equipping Punjab’s government officials with the knowledge and hands-on experience to collaborate with AI in ways that are practical, responsible, and directly relevant to their policy and planning responsibilities.

Workshop Overview

This two-day-long, immersive workshop will introduce participants to the concept of Adaptive AI as a thinking partner – a collaborator that augments human intelligence rather than replaces it. Through a carefully designed blend of foundational theory, live demonstrations, and interactive exercises, participants will learn how to apply AI for:

- Reviewing and analyzing provincial policy documents with speed and precision.
- Conducting comparative policy assessments to identify best practices and gaps.
- Interpreting and communicating complex datasets in ways that inform strategic decisions.
- Integrating policy and data analysis to produce evidence-based recommendations for provincial leadership.

The training will use real Government of Punjab policy documents and official datasets to ensure that the learning is immediately transferable to participants' work. The sessions will also explore ethical considerations, data privacy safeguards, and techniques to avoid bias in AI-supported decision-making—ensuring that AI use aligns with the principles of transparency, accountability, and equity in governance.

Objectives

By the end of the workshop, participants will:

1. Understand AI and generative AI fundamentals, and their relevance to governance.
2. Apply AI techniques for in-depth policy document analysis and comparative studies relevant to Punjab.
3. Interpret and communicate complex datasets using AI-assisted workflows.
4. Integrate policy review with performance data for evidence-based recommendations in provincial planning.
5. Develop a personal and departmental roadmap for sustainable AI adoption within the Government of Punjab.

Key Components

Session 1: AI & Generative AI Fundamentals

Foundational concepts, evolution of AI, capabilities of large language models, and live demonstrations of AI in action.

Session 2: AI for Policy Document Analysis

In-depth application of AI for summarization, gap identification, comparative policy review, and implementation readiness assessment using real government policy documents.

Session 3: AI-Enhanced Data Analysis

Using AI to transform raw data into insights through interpretation, executive storytelling, and data visualization tailored for strategic decision-making.

Session 4: Integrated Document & Data Analysis

Linking policy objectives with performance data through case studies, generating integrated insights, and developing data-backed executive briefs.

Session 5: Practice Labs – Build Your Own AI Workflows

Hands-on session where participants design and test sector-specific AI prompt flows, receive facilitator feedback, and peer-review each other's outputs.

Session 6: Simulation & Role-Based Application

Real-time roleplay exercises simulating government decision-making scenarios using AI, with teams presenting outputs and recommendations to the group.

Session 7: Implementation Strategy & Future Planning

Developing personal and departmental AI adoption roadmaps, exploring integration strategies, prompt toolkit walkthrough, open Q&A, and workshop close.

Methodology

The workshop will follow a highly interactive and practice-oriented approach to ensure participants not only understand AI concepts but can confidently apply them in their work. Key features include:

Foundational Briefings – Short, focused presentations to introduce core AI concepts, generative AI fundamentals, and governance applications.

Live Demonstrations – Real-time walkthroughs of AI tools analyzing Government of Punjab policy documents and datasets.

Hands-on Exercises – Guided, step-by-step practice sessions where participants use AI to summarize documents, identify policy gaps, compare policies, interpret datasets, and create executive briefs.

Case Studies – Real-world policy scenarios relevant to Punjab, integrating both document review and performance data analysis to create actionable recommendations.

Peer Collaboration – Small group activities and discussions to encourage cross-departmental knowledge exchange and joint problem-solving.

Prompt Development Practice – Training participants to craft effective AI prompts for different governance tasks (policy analysis, data storytelling, risk assessment).

Ethics & Safeguards Dialogue – Facilitated conversation on responsible AI use, privacy, and bias mitigation in the provincial governance context.

Action Planning – Individual and departmental AI adoption roadmaps to ensure post-workshop continuity and application of learning.

Expected Outcomes

Note

Key Outcomes

- Development of AI-driven policy and data analysis techniques
- Practical prompt frameworks and toolkits for daily use
- Document review processes are faster and more efficient
- Improved data storytelling and executive communication skills
- A clear strategy for embedding AI into individual and departmental workflows within the Government of Punjab

Workshop Details

Important

Essential Information

Duration: Two Full Days

Target Audience: Officials from the Planning & Development Department and other Government of Punjab departments, Academia, PITB, BOS at all experience levels

Facilitator: Prof. Dr. Zahid Asghar, School of Economics, Quaid-i-Azam University, Islamabad

Day 1 Agenda

AI as Your Thinking Partner

Time: 9:00 AM – 4:00 PM

Table 1: Day 1 Schedule

Time	Session	Description
9:00 AM – 9:30 AM	Workshop Opening & Orientation	Welcome & Introductions; Objectives & Outcomes; Icebreaker: “What’s one AI use case you’re curious about?”
9:30 AM – 11:00 AM	Session 1: Understanding AI & Generative AI Fundamentals	What is AI? How it differs from traditional software; Evolution of Generative AI and LLMs; Overview of tools: ChatGPT-5, Claude, Gemini; Government applications; Live Demo: Policy document analysis
11:00 AM – 11:15 AM	Tea Break	
11:15 AM – 1:00 PM	Session 2: AI for Policy Document Analysis	Document Analysis Capabilities; Exercise 1: Deep Dive into Punjab Industrial Policy 2025; Exercise 2: Compare Punjab & Sindh Industrial Policies; Exercise 3: Implementation Readiness Framework; Prompting for high-quality insights
1:00 PM – 2:00 PM	Lunch Break	
2:00 PM – 3:30 PM	Session 3: AI-Enhanced Data Analysis	How AI transforms data workflows; Exercise 1: Punjab Development Statistics 2024; Exercise 2: Create a CM-level narrative; Visuals: AI-generated charts, narratives, dashboards
3:30 PM – 4:00 PM	Reflection & Wrap-Up of Day 1	Recap key takeaways; Reflection prompt: “What surprised you today?”; Preview of Day 2

Day 2 Agenda

Time: 9:00 AM – 4:00 PM

Table 2: Day 2 Schedule

Time	Session	Description
9:00 AM – 10:30 AM	Session 4: Integrated Document & Data Analysis	Case Study: Punjab Education Policy + Literacy Data; Exercise 1: Is the policy working? Evidence-based review; Exercise 2: Create an executive 2-page brief; Advanced collaboration techniques with AI
10:30 AM – 10:45 AM	Tea Break	
10:45 AM – 12:30 PM	Session 5: Practice Labs – Create Your Own AI Workflows	Choose your theme: Health, Education, Energy, Industry, Planning; Design your own prompt flow using real policy + data; Peer-to-peer testing; Facilitator feedback
12:30 PM – 1:30 PM	Lunch Break	
1:30 PM – 2:45 PM	Session 6: Simulation & Roleplay	Scenarios: Health emergency planning, Budget prioritization, District-level performance review; Participants act as: Secretary, Analyst, Implementer; Group presentations
2:45 PM – 3:00 PM	Tea Break	
3:00 PM – 4:00 PM	Session 7: Implementation Strategy & Future Planning	Personal AI Adoption Plans; Department Integration Roadmap; AI Toolkit Walkthrough; Open Q&A; Evaluation + Feedback; Closing Remarks + Certificate Distribution

Key Workshop Deliverables

Document Analysis Mastery

1. **Policy Review Automation:** 80% faster document analysis
2. **Comparative Policy Studies:** Cross-jurisdictional best practices
3. **Implementation Readiness Assessment:** Feasibility and risk evaluation

Data Analysis Excellence

1. **AI Data Interpretation:** Transform statistics into actionable insights
2. **Executive Reporting:** Create compelling data stories
3. **Visualization Strategy:** Design impactful charts with AI guidance

Integrated Analysis Capabilities

1. **Policy-Data Synthesis:** Combine document review with performance data
2. **Evidence-Based Recommendations:** AI-enhanced policy improvement

3. **Executive Communications:** Clear, actionable briefing notes

Technical Requirements

Participants should ensure they have the following:

- Laptop with internet access
- AI tool accounts (ChatGPT, Claude, or Gemini)
- Sample policy documents (provided)
- Punjab development datasets (provided)
- PDF upload capabilities for document analysis

Success Metrics

Tip

Expected Impact

- **70%** reduction in document review time
- **50%** improvement in data analysis speed
- Enhanced policy recommendation quality
- Measurable productivity gains within 30 days

This workshop bridges AI technology with governance needs, empowering Punjab's officials to leverage AI as a strategic thinking partner for evidence-based policy making and effective public service delivery.
